## Abstract

### **ARISTOTLE ON ETHICAL (MAINLY) AND ECONOMIC CRISIS**

The Aristotelian value of *mediation* has been brutally violated during the last decades by those who are responsible for the financial issues and those who govern. The crisis that today plagues our societies has emerged from this violation. What kind of treatments would Aristotle propose?

I will only try to investigate, through the teachings of the Stageirite philosopher, how he would understand our current human problems and which procedures he would suggest toward their resolution.
